

Sybase iAnywhere

iAnywhere Validated Device List

iAnywhere Mobile Office, OneBridge and Afaria

Last Updated: May 31, 2011

Validated Devices to date: 354

L1 Validated Devices: 268

L2 Validated Devices: 86

Validated Device Level Support

Sybase iAnywhere offers two levels of device support in order to provide customers the greatest number of validated devices.

Afaria is designed to support the operating system of the device and not specific device models. The device operating systems that are supported are outlined in the system requirements for the relevant builds of Afaria. Although it is the operating system of the device we support, the list below reflects those devices upon which the product has been tested and validated for operability.

Level 1 Device (L1):

A Level 1 device is the exact device certified by Sybase iAnywhere. A Level 1 device is built on the same hardware platform, has the same operating system loaded on it, and runs the same ROM version as the device certified by Sybase iAnywhere.

Level 2 Device (L2):

A Level 2 device is built on the same hardware platform and has the same operating system loaded on it as its Level 1 counterpart on the Information Anywhere Validated Device List. The device is not running the same ROM version as the Level 1 device certified by Sybase iAnywhere. In the event that an issue is identified on an L2 device additional time may be required to resolve the issue.

iAnywhere Validated Device List
